

This form must be completed and submitted with every assignment, as per the department's Academic Integrity and AI Policy. Transparency is essential to proving your creative ownership and learning process.

Part 1: Student & Assignment Details

Student Name: Andrew Cassar

ID Number: 0151207L

Unit: Web Development

Task: 2

Date: 15/05/2026

Part 2: Declaration of AI Use

Please select one of the following options:

☐ **Option A: No AI Used:** I declare that I did not use any generative AI tools in the conception, development, or creation of this assignment. The submitted work is entirely my own.

☒ **Option B: AI Used:** I declare that I did use AI tools to assist in the creation of this assignment. I have provided a transparent and accurate account of its use in Part 3 below and have submitted all required process work in support of my final submission.

Part 3: Description of How AI Was Used

(Please tick all that apply and provide a brief, specific example for each. For an explanation of each refer to the AI Use Policy Manual)

☐ Ideation & Brainstorming

☐ Research & Summarization

☒ Text Generation & Refinement (Writing/Scripting)

☒ Image/Asset Generation:

☐ Other (Please specify):

- I found a code online which I tried and tested to my code, this didn't end up working after multiple attempts so asked AI using the zip files found online and my own code, to see what I was doing wrong. The tweaks worked but still had some code I didn't want so removed them and customised it to my preference.

add-to-cart-

ZIP

```
<!DOCTYPE html> <html lang="en"> <head> <meta charset="UTF-8"> <meta name="viewport" content="width=device-width, initial-scale=1.0"> <title>...
```

PASTED

i want to add a add to cart feature to my website, attached is my product page code, i want when i click the add to cart button the product goes to my cart which is cart.html, i also added a zip file where there is code on a cart feature

Now I have a clear picture of everything. The zip file contains a sliding cart panel (CodyHouse style) that pops out on the page — but your site has a separate `cart.html`. I'll build you a `localStorage`-based add-to-cart system that's perfect for your setup: clicking "Add to Cart" saves the product to `localStorage`, then `cart.html` reads it and displays the items.

I'll create two files: an updated `product-page.js` and a `cart.js` for your cart page.

Created 4 files, read a file >

Here's what you get — 3 files to drop into your project:

How to plug them in:

1. `product-page.js` → replace your existing `assets/scripts/product-page.js` with this one. It adds the full cart logic (size validation, `localStorage` save, toast notification, badge on the cart icon).
2. `cart.js` → save this as `assets/scripts/cart.js` (new file).
3. `cart.html` → replace your existing `cart.html` with this one (or copy the layout into yours).

How it works:

- On the product page, clicking "Add to Cart" first checks a size is selected — if not, it shows a red toast: *"Please select a size first."* If a size is picked, it saves the item to `localStorage` and shows a dark toast: *"Added to cart!"*
- If you add the same product in the same size again, it increments the quantity instead of adding a duplicate.
- The cart icon in the nav gets a red badge showing the item count.
- On `cart.html`, your items are rendered automatically from `localStorage` with +/- quantity controls, a remove button, and a live order summary (free shipping kicks in over €50).

Product Page Placement

- My product pages have a div which is divided into a row of 2 columns, which were divided into a row of a 2x2 grid and a div which had all the product information. I gave AI my code and explained my vision, with also a picture of my existing Figma layout, for how the final version of my Product Page wanted to end up. It explained what I needed to do and with these tweaks I managed to fix my code.

the above is my code and css that i want to use for my product images, i want my final code to look like the image attached, i want this code to be on the left side then have the other details that i have no code yet for, on the right. what do i have to change in my code so i get that outcome, i basically want to press any of the 4 images and it increases in size so it can be seen bigger

Reading frontend design skill >

Here's what needs to change to match the layout in your screenshot:

Key changes:

1. Wrap everything in a **two-column flex layout** (images left, details right)
2. Change the image grid to **2x2** instead of 4 in a row
3. Make the first image the **large "main" preview** that updates when you click a thumbnail
4. Fix the `.container2` → `.container` mismatch in your CSS

Created a file, read a file >

Here's what changed and why:

Layout fix — two-column flex: The whole page is now a `display: flex` row. Gallery takes ~55% on the left, product details ~40% on the right — exactly like your screenshot.

Image behaviour:

- The **large main image** at the top updates when you click any thumbnail (instead of expanding inline, which broke your layout)
- Clicking the main image opens a **fullscreen lightbox** — this is the "bigger view" you wanted
- The active thumbnail gets a dark border so you always know which one is selected
- The 4 thumbnails sit in a `grid-template-columns: repeat(4, 1fr)` row below

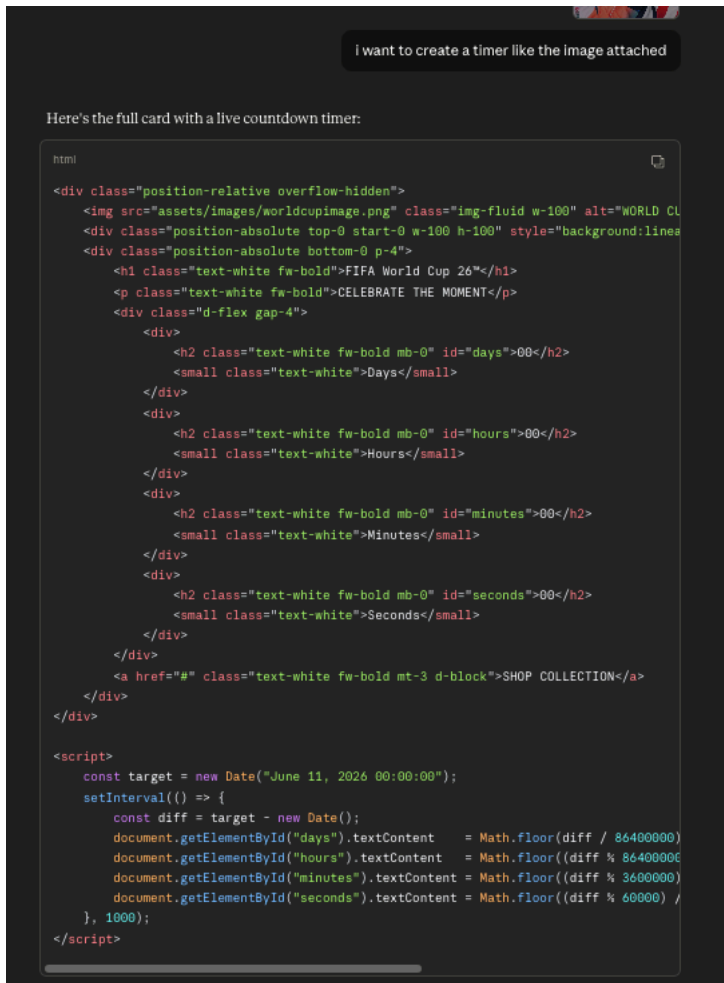

Right panel — built from scratch: Since you had no code for the details, I added size buttons (with click-to-select), a quantity +/- control, the Add to Cart button, and the description — all styled to match your screenshot.

Your old CSS issue fixed: Your original CSS had `.container` but your HTML used `.container2` — that's why the expand never worked. The new lightbox approach avoids that entirely.

Just drop in your real image paths and it's ready to go!

Pages' Display Image

- World Cup Timer: I found a code for a timer online, but it was not working at all, not even showing up on my website. Therefore, found an example of what I had in mind and asked AI to give me a code. I customised it to my preference and added it to my website.

☒ I confirm that I have submitted all required process and development materials alongside my final work, as outlined in the AI Policy.

☒ I confirm that the information provided on this form is a complete and accurate representation of my use of AI tools for this assignment. I have read and understood the Academic Integrity and AI Policy, and I am aware that failing to declare AI use, or misrepresenting its use, constitutes **plagiarism** and will result in disciplinary action.

Print to PDF and include in your submission once completed.
