

TASK 3

EVALUATION AND TESTING

Project: JodieTonna-GRD-Web | Amazon Redesign

1. IPO CHARTS

index.html

Input	Process	Output
Page loads in browser	HTML and CSS operates navbar, carousel, product cards, footer	Fully styled homepage displayed
User clicks carousel Previous / Next arrows	HTML and CSS slides carousel to previous or next image	Carousel image changes; navigation arrows respond
User clicks a carousel image (Books / Offers)	Browser follows <a> href to Offers-Books.html or offers.html	User is redirected to linked page
User clicks a product card	Browser follows <a> href (productGoogle.html)	Product detail page opens
User clicks 'View More' in deals section	Browser follows href to offers.html	Offers page loads
User clicks 'View More' in New Releases section	Browser follows href to NewReleases.html	New Releases page loads
User types in search bar	Input is captured	Text appears in search box but no search results returned
User clicks navbar icons (person/basket/heart)	Browser follows href to account.html / Basket.html / Favorites.html	Correct page navigates
User clicks 'All' dropdown	Bootstrap dropdown opens listing departments and help links	Dropdown menu visible with navigation links
User clicks 'Sign up' in mailing list box	Browser follows href to contact.html	Contact form page opens
User clicks any footer link (text only)	Footer items are plain <p> elements with no href	No navigation to external pages

contact.html

Input	Process	Output
Page loads	HTML and CSS operates form with two fieldsets, input fields, checkbox, buttons	Styled mailing-list form displayed
User fills First Name, Last Name, Email, Phone	HTML required attributes validate on submit	Input accepted if valid; highlighted if empty/incorrect
User submits valid form (clicks Send)	Form opens	Default email client opens with form data, depends on browser
User submits with empty required fields	HTML built-in validation overlay	Browser shows 'Please fill in this field' tooltip; form not submitted
User enters phone without space	Pattern fails validation	Browser shows format error
User clicks Cancel button	Browser follows href to index.html	User returned to homepage
User ticks 'Contact me about new offers' checkbox	Checkbox value changed	Checkbox checked

Basket.html

Input	Process	Output
Page loads	HTML and CSS operates	Basket summary panel
Page loads with static hardcoded items	4 items render: 3 in stock, 1 out of stock	Item list displayed with prices and stock status
User clicks delete icon on an item	HTML/CSS/JS operates	Item disappears
User clicks 'Confirm Purchase'	Cart popup overlay displays	Success popup: 'All items have been Purchased' shown
User clicks OK in popup	Cart popup overlay hides	Popup dismissed
Basket contains an out-of-stock item	Data should change	Stock line stays at '0 items out of stock'
User clicks navbar links	Standard navigation across site	Target page opens

account.html

Input	Process	Output
Page loads	HTML and CSS operates	Account page displayed
User clicks navbar links	Standard navigation across site	Target page opens

helpcentre.html

Input	Process	Output
Page loads	HTML and CSS operates	Help page displayed
User clicks navbar links	Standard navigation across site	Target page opens

productGoogle.html / productMaybelline.html / productYourFault.html

Input	Process	Output
Page loads	HTML and CSS operates displaying product image, title, price, description	Product detail page displayed
User clicks 'Add to Cart'	Button present in HTML, pop up	Pop up appears
User clicks navigates through images	HTML and CSS operates image rotation	Images are displayed
User clicks 'Reviews'	Display HTML chnage	Review page opens

offers.html / Offers-Books.html

Input	Process	Output
Page loads	HTML and CSS operates	Offers page displayed with product cards
User clicks a deal card	href to product detail page	Product page opens (opens only one product page)
User clicks 'Category'	href to relevant section page	Category dropdown is loads

2. TEST CASE TABLES

TC-01 index.html

Test ID	Description	Input / Action	Expected Output	Actual Output	Result
TC-01-01	Page loads with correct layout	Open index.html in browser	Navbar, carousel, product cards, footer all visible and styled	Page loads correctly with Bootstrap layout and custom CSS	PASS
TC-01-02	Carousel advances on Next click	Click right carousel arrow	Carousel slides to next image	Carousel slides as expected using Bootstrap JS	PASS
TC-01-03	Clicking carousel slide 1 and 2 navigates	Click first carousel image	Redirects to Offers-Books. html and offers.html	Wrapped in <a> tag, therefore navigation works	PASS
TC-01-04	Clicking carousel slide 3 navigates	Click third carousel image	Should navigate to a relevant page	No <a> wrapper on slide 3 therefore no navigation occurs	FAIL
TC-01-05	Product card navigates to correct product	Click Google Pixel card	productGoogle.html opens	Correct href present, therefore works	PASS
TC-01-06	Product card navigates to correct product	Click Maybelline New York card	productMaybelline.html opens	Correct href present, therefore works	PASS
TC-01-07	Product card navigates to correct product	Click Your Fault card	productYourFault.html opens	Correct href present, therefore works	PASS
TC-01-08	'Sign up' mailing list button navigates to contact.html	Click Sign Up in blue section	contact.html opens	Correct href therefore works	PASS
* TC-01-09	Pressing on 'Location' and 'Language' buttons should open specific page	Click Location or Language in the top section	navigation to specific page or pop up of an overlay should occur	Footer items are plain <p> text with no href therefore not usable	FAIL
* TC-01-10	Pressing 'Help' button navigates to helpcentre. html	Click Help in the top section	helpcentre.html opens	Correct href therefore works	PASS
* TC-01-11	Search bar accepts text input	Type 'example' into search bar	Text appears in input field	Input works visually with no search results returned	PASS
* TC-01-12	'All' dropdown opens on click	Click 'All' nav button	Dropdown menu appears with departments listed	Bootstrap dropdown works correctly	PASS
* TC-01-13	Navbar account icon navigates to account.html	Click account icon	account.html opens	Correct href therefore works	PASS
* TC-01-14	Navbar basket icon navigates to Basket.html	Click shopping bag icon	Basket.html opens	Correct href therefore works	PASS
* TC-01-15	Navbar basket icon navigates to Favorites.html	Click favorites icon	Favorites.html opens	Correct href therefore works	PASS
* TC-01-16	Footer links are clickable	Click 'About Us' or 'Careers' in footer	Should navigate to relevant page	Footer items are plain <p> text with no href therefore not usable	FAIL

* These features are on every page, with every page resulting in the same results

TC-02 contact.html

Test ID	Description	Input / Action	Expected Output	Actual Output	Result
TC-02-01	Form displays all fields correctly	Open contact.html	First Name, Last Name, Email, Phone, Checkbox, Send/Cancel visible	All fields render correctly	PASS
TC-02-02	Submit with all fields valid	Enter 'John', 'Doe', 'john@email.com', '9922 4466'; click Send	mailto client opens with form data	Triggers mailto - opens email client on Safari, doesn't work on Opera	PASS
TC-02-03	Submit with any empty text field	Leave any text field empty then click Send	Browser validation error shown on the empty text field	'required' fires - validation message shown	PASS
TC-02-04	Submit with phone in wrong format (no space)	Enter phone as '99224466' then click Send	Validation error: pattern mismatch	'required' fires - validation message shown	PASS
TC-02-05	Email field has no type='email' validation	Enter 'notanemail' then click Send	Should show email format error	input type='text' used instead of type='email' therefore no email format	FAIL
TC-02-06	Cancel button returns to homepage	Click Cancel	index.html opens	href='index.html' on Cancel therefore works	PASS
TC-02-07	Checkbox can be toggled	Click 'Contact me about new offers' checkbox	Checkbox toggles checked/unchecked	Standard checkbox therefore works	PASS

TC-03 Basket.html

Test ID	Description	Input / Action	Expected Output	Actual Output	Result
TC-03-01	Basket loads with items and correct totals	Open Basket.html	4 items shown - JS totals calculated correctly	Items shows - but no total has changed (€0)	FAIL
TC-03-02	Delete icon removes item	Click delete icon on any item	Item removed from list	JS removes element therefore works	PASS
TC-03-03	Out-of-stock item flagged in stats	Review basket summary panel on load	'1 item out of stock' shown in stats	'0 item out of stock' shown in stats - basket information doesn't change	FAIL
TC-03-04	Confirm Purchase shows success popup	Click 'Confirm Purchase' button	Overlay popup appears with success message	Popup appears as expected	PASS
TC-03-05	OK button dismisses popup	Click OK in popup	Popup disappears	closePopup() works	PASS
TC-03-06	Basket items are hardcoded (not dynamic)	Add a product to basket from pages then open Basket.html	Basket should reflect items added	Items are hardcoded in HTML meaning basket does not reflect real user	FAIL
TC-03-07	No quantity selector available	Try to change quantity of an item	Quantity adjuster (+ or -) should appear	No quantity controls present in HTML	FAIL

TC-04 productGoogle / productMaybelline / productYourFault

Test ID	Description	Input / Action	Expected Output	Actual Output	Result
TC-04-01	Product page loads with image and details	Open productGoogle.html	Product image, name, price, description visible	Product pages load correctly	PASS
TC-04-02	Review link navigates to review page	Click review link on product page	reviewGooglePixel.html / review pages open	Review pages present and linked	PASS
TC-04-03	Add to Cart functionality	Click 'Add to Cart' on product page	Item added dynamically to basket	Basket is hardcoded HTML meaning 'Add to Card' does not dynamically update basket but overlay works	FAIL
TC-04-04	Product description page accessible	Navigate to Description	Full description displayed	Description pages exist and load but only visible for 'Your Fault' product	PASS
TC-04-05	Similar products image navigation	Try and click on the similar products	A clickable button that shows a product	No <a> or <href> on image and description HTML therefore no navigation or button feature occurs	FAIL

3. CODE VALIDATION FINDINGS

HTML Structure

Check	Detail	Status
DOCTYPE declared	<!DOCTYPE html> present on all pages reviewed	PASS
lang attribute on <html>	lang='en' present on all pages reviewed	PASS
charset meta tag	<meta charset='UTF-8'> present on all pages	PASS
viewport meta tag	Responsive viewport meta present on all pages	PASS
Bootstrap and custom CSS linked	bootstrap.min.css and AmazonIndex.css linked correctly	PASS
Google Fonts correctly linked	Inter font and Material Symbols linked in <head>	PASS
Unclosed <a> tag in index.html	Deals section has an closing tag misplaced outside a card's parent, breaking nesting around line 287	FAIL
Nested <p> elements in index.html	A <p> tag is opened inside another <p> block in Hot New Releases section - invalid HTML	FAIL
Email input uses type='text'	contact.html email field uses type='text' not type='email' - loses built-in email validation	FAIL
Footer items not linked	All footer <p> elements are plain text - should be <a> tags for navigation	FAIL
Multiple product cards link to wrong page	Several product cards on homepage all href to productGoogle.html regardless of product shown	FAIL
Alt text on main images	Most product images include alt attributes	PASS
Some alt texts are generic	Several product card images use alt='Google Pixel 10' regardless of the actual product shown	FAIL
Consistent navbar across pages	Navbar HTML is copied consistently to each page	PASS
No semantic landmark elements	No <main>, <article>, or <section> used - reduces accessibility and SEO	WARNING
.DS_Store committed to repo	macOS system file .DS_Store should be gitignored	WARNING

CSS Observations

This project uses a single shared stylesheet (AmazonIndex.css) for all 28 pages.

Observations:

Positive: One CSS file keeps styles consistent across the entire site.

Positive: Bootstrap is used correctly for grid layout and navbar responsiveness.

Concern: With all styles in a single file and no class namespace, there is a risk of unintended style conflicts if the project grows.

Concern: No CSS media queries were observed beyond Bootstrap's built-in breakpoints, with custom sections not be fully responsive.

JavaScript Observations

The project uses a single shared JS file (amazonIndex.js). Based on the Basket.html code, the JS handles basket totals, delete functionality, and pop-up confirmation.

Positive: Basket logic correctly reads data-price and data-stock attributes to calculate totals dynamically.

Positive: Delete functionality uses DOM manipulation to remove items without a page reload.

Concern: The search bar has no JavaScript handler, and typing in the search field does nothing functional.

Concern: The basket items are hardcoded in HTML. There is no mechanism for items added from product pages to appear in the basket.

4. SUGGESTIONS FOR FURTHER ENHANCEMENT

#	Enhancement	Description
1	Make the Search Bar Work	Right now, typing in the search bar does nothing. It would be a great idea to add some JavaScript so that when the user types, the product cards on the page filter to match what they are searching for.
2	Make the Basket Remember Items	At the moment, the basket always shows the same fixed items. It would be better if clicking 'Add to Basket' on a product page actually added that item to the basket.
3	Fix the Product Card Links	Many product cards on the homepage go to the wrong page when clicked or not even clickable. They all link to the Google Pixel page even if the card shows a different product and that product has a HTML code for it. Each card should link to a product page.
4	Fix the Email Field on the Contact Form	The email input box on the contact form does not check if what you type is actually an email address. Something small that could change the contact form to its full capability.
5	Make Footer Links Clickable	The links in the footer (like 'About Us' and 'Help Centre') look like links but cannot be clicked. They should be turned into proper links that take the user to the right page, especially when some of the pages exist and are coded.
6	Add a Quantity Selector to the Basket	Currently you cannot change how many of an item you want in the basket. Adding + and - buttons next to each item would let users pick a quantity.
7	Add a Simple Login to the Account Page	The account page is quite empty. It could be improved by adding a simple login form where the user enters a username and password. Even if it just checks made-up details, it would make the page feel more complete.
8	Make the Site Work Better on Mobile	Some parts of the site (like the product cards and basket) may not look great on a phone screen. Adding some extra CSS rules for smaller screens would make sure everything fits and is easy to read on mobile.
9	Improve Alt Text on Images	Some product images have alt text that says 'Google Pixel 10' even when the image is of a different product. Alt text should describe what the image actually shows. This also helps people who use screen readers.
10	Add Filters on Category Pages	On the Books, Electronics, and Beauty pages, it would be useful to add buttons that let the user filter products, for example by price or type. This would make it much easier to find what you are looking for, also making it look less cluttered and busy.

Overall Summary

Overall, the project is a good Amazon redesign. It has a clear layout, the same navbar on every page, good use of Bootstrap, and three working product pages, each with a review and brand page. It's not my favourite design, but it's built and designed to be accessible. The basket page is a highlight feature that caught my eye.

The main things to fix are that some product cards link to the wrong page, the basket items are fixed and do not update, the search bar does not work, and the footer links cannot be clicked. These are all fairly simple changes that would make the site a lot more finished.

In my opinion, as much as it is a redesign, I feel it is a copy-and-paste design of the real Amazon website. I personally think a lot more creativity could have been done, with different features, and the overall design of the website could have been improved rather than copied.
